

How to Title your photos

Select one or more photos and press (Cmd+P).

In the Print dialogue box pick a project and click customize. Click the layout button to choose a design that shows text.

If you want to save back to iphoto, click on print and from the PDF. Pull-down menu save PDF to iphoto.

Changing fonts, Styles, and Sizes

iPhoto also provides several ways to modify the font, style, and size of selected text.

To change fonts, styles, and sizes:

1. Select the text you want to change.

2. Open the Font palette by choosing Show

Fonts (Cmd+T) from the Edit menu's Font submenu.

3. In the Font palette, you can choose a font from the Family column, a style from the Typeface column, and a size from the Size column (**Figure 6.47**).

iPhoto changes the currently selected text to match your choices.

To change just styles:

* Select some text, and from the Edit menu's Font submenu, choose Bold (CmdB) or Italic.

* C-click the selected text, and choose Bold, Italic, Underline, or Outline from the contextual Font submenu.

Tips

* Bold and Italic are dimmed in the menus if the current font has no Bold or Italic

typeface. Check the Font palette to verify.

* iPhoto does not provide keyboard shortcuts for Italic, Underline, or Outline.

* The Restore Defaults button in the settings dialog also overrides any individual font changes you've made.

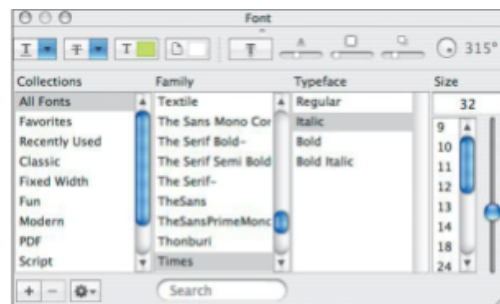

Figure 6.47 Select the font, style, and size from the Family, Typeface, and Size columns in the Font palette.
