

iPhoto Rebuild and Create

iPhoto 5 & 6: When launching iPhoto, hold down the Option & Command keys. a dialog with choices is presented . Choose the option to rebuild the library database (unless your issue is only thumbnail related - then those choices might work better for your situation).

Data is preserved. Albums and roll information is preserved, and no picture files are moved inside the iPhoto library folders. The process can take a while depending on the size of your albums.

Creating and selecting a different library.

If you hold down Shift & Option keys at launch, you can tell iPhoto 6 to create or use a different library folder... very nice if you wanted to maintain different libraries for some reason.
